

Selection    Checkbox

- Option 1
- Option 2
- Option 3
- X    Option 4
- X    Option 5
- Option 6
- Option 7
- X    Option 8
- Option 9
- Option 10
- Option 11
- X    Option 12
- Option 13
- Option 14

Lets say you have a series of checkboxes and you want to update the database with the checked data. If the database currently holds Options 5, 9 & 13, how do you programmatically go about replacing those options with the new options 4, 5 & 12. Currently I am first deleting all the rows that relate to Tenant 1 and then replacing them with the new data. I am just wondering if there is a better way of updating a table using this logic.

Database Holds

- Tenant 1    Option 5
- Tenant 1    Option 9
- Tenant 1    Option 13
